

GS Mfg. developed the first foam-in-place urethane packaging system through years of research and technical experience, and as a superior alternative to wooden crates, cardboard wrap-rounds, bubble paks and premolded inserts. The GS Mfg. Pak-N-Foam[®] Dispensing Equipment is cost-effective in these many ways:

- By reducing your packaging inventory substantially.
- By increasing your labor output, thanks to Pak-N-Foam[®]'s simplified application.
- By saving on freight and handling costs due to the lightweight nature of the foam.
- By utilizing existing plant personnel in its operation.

Model PP-101: The GS Mfg. Pak-N-Foam[®] Dispensing System.

Patented,
U.S.A. and Foreign.
